

STERI-7 Bio-Security

STERI-7 PRODUCTS

[STERI-7 Ready to Use 500ml:](#) Is a High Level Broad Spectrum Biocidal cleaner disinfectant. It is designed for use in Low to Medium level contamination. It is effective against all harmful pathogens, including E.Coli, Salmonella, Listeria, Avian Flu, Swine Flu, Poliovirus, MRSA and Clostridium Difficile Spores. It is food safe, works in both clean and soiled conditions, does not require rinsing and contains STERI-7 Reactive Barrier Technology (RBT), which allows it to continue protecting treated surfaces between cleans.

[STERI-7 Ready to Use 500ml with Lemon Burst:](#) Is a High Level Broad Spectrum Biocidal cleaner disinfectant. It is designed for use in Low to Medium level contamination. It is effective against all harmful pathogens, including, E.Coli, Salmonella, Listeria, Avian Flu, Swine Flu, MRSA, Poliovirus and Clostridium Difficile Spores. It works in both clean and soiled conditions, does not require rinsing and contains STERI-7 Reactive Barrier Technology (RBT), which allows it to continue protecting treated surfaces between cleans.

[STERI-7 Ready to Use 750ml:](#) Is a High Level Broad Spectrum Biocidal cleaner disinfectant. It is designed for use in Low to High level contamination. It is effective against all harmful pathogens, including: E.Coli, Salmonella, Listeria, Avian Flu, Swine Flu, Poliovirus, MRSA and Clostridium Difficile Spores. It is food safe, works in both clean and soiled conditions, does not require rinsing and contains STERI-7 Reactive Barrier Technology (RBT), which allows it to continue protecting treated surfaces between cleans. (Available in 5 litres).

It works in both clean and soiled conditions, does not require rinsing and contains STERI-7 Reactive Barrier Technology (RBT), which allows it to continue protecting treated surfaces between cleans. . (Available in 5 litres).

STERI-7 Bio-Security (continued)

STERI-7 WIPES; PILLOW & TUB: Are designed for use in Low to High level contamination. They are impregnated with STERI-7 Biocidal Cleaner disinfectant solution containing RBT. They are effective against all harmful pathogens, including: E.Coli, Salmonella, Listeria, Avian Flu, Swine Flu, Poliovirus, MRSA and Clostridium Difficile Spores. They are food safe, works in both clean and soiled conditions; do not require rinsing and contain STERI-7 Reactive Barrier Technology (RBT), which allows it to continue protecting treated surfaces between cleans

STERI-7 CONCENTRATE 5 Litre: Is a concentrated High Level Broad Spectrum Biocidal cleaner disinfectant. It is designed for use in Low to High level contamination through dilution. It may generally be diluted between, 2% and 10% depending on contamination. It is effective against all harmful pathogens, including: E.Coli, Salmonella, Listeria, Avian Flu, Swine Flu, Poliovirus, MRSA and Clostridium Difficile Spores. It is food safe, works in both clean and soiled conditions, does not require rinsing and contains STERI-7 Reactive Barrier Technology (RBT), which allows it to continue protecting treated surfaces between cleans. It is suggested that it be used in a 10% solution in high risk areas, such as theatres, CSSDs, isolation wards etc. For general use a 2% solution will effect protection against all harmful pathogens, including Swine Flu, MRSA and Clostridium Difficile.

STERI-7 CONCENTRATE 5 Litre with Lemon Burst: Is a concentrated High Level Broad Spectrum Biocidal cleaner disinfectant. It is designed for use in Low to High level contamination through dilution. It may generally be diluted between, 2% and 10% depending on contamination. It is effective against all harmful pathogens, including: E.Coli, Salmonella, Listeria, Avian Flu, Swine Flu, Poliovirus, MRSA and Clostridium Difficile Spores. It works in both clean and soiled conditions, does not require rinsing and contains STERI-7 Reactive Barrier Technology (RBT), which allows it to continue protecting treated surfaces between cleans. It is suggested that it be used in a 10% solution in high risk areas, such as Hospital Theatres, Sterile Service Departments, Isolation Wards or rooms etc. For general use a 2% solution will effect protection against all harmful pathogens, including Swine Flu, MRSA and Clostridium Difficile.

STERI-7 HEAVY DUTY CONCENTRATE 5 Litre: Is a concentrated Heavy Duty Broad Spectrum Biocidal cleaner disinfectant. It is food safe and designed for use in heavily soiled Low to Medium level contamination areas through dilution. It may generally be diluted at a 2% solution. It is effective against all harmful pathogens, including: E.Coli, Salmonella, Listeria, Avian Flu, Swine Flu, Poliovirus, MRSA and Clostridium Difficile Spores. It works in both clean and soiled conditions, does not require rinsing and contains STERI-7 Reactive Barrier Technology (RBT), which allows it to continue protecting treated surfaces between cleans. It is suggested that it be used in a 2% solution for mopping floors and walls. It is formulated for use in heavily soiled areas, including kitchens and bathrooms.

STERI-7 HEAVY DUTY CONCENTRATE 5 Litre with Lemon Burst: Is a concentrated Heavy Duty Broad Spectrum Biocidal cleaner disinfectant. It is designed for use in heavily soiled Low to Medium level contamination areas through dilution. It may generally be diluted at a 2% solution. It is effective against all harmful pathogens, including: E.Coli, Salmonella, Listeria, Avian Flu, Swine Flu, Poliovirus, MRSA and Clostridium Difficile Spores. It works in both clean and soiled conditions, does not require rinsing and contains STERI-7 Reactive Barrier Technology (RBT), which allows it to continue protecting treated surfaces between cleans. It is suggested that it be used in a 2% solution for mopping floors and walls. It is formulated for use in heavily soiled areas, including corridors, toilet areas and bathrooms.

STERI-7 SPORICIDAL FOAMING HAND SANITISER & SOAP: Both products are designed for hand cleaning and sanitising. The soap requires the use of water; the hand sanitiser is designed for use where water is not available. It may however be used as a substitute soap. Both products are sporicidal, and are effective against all harmful pathogens, including: E.Coli, Salmonella, Listeria, Avian Flu, Swine Flu, Poliovirus, MRSA and Clostridium Difficile Spores. Both products contain a re-moisturising effect, making them ideal for frequent users. They are both 100% organic, food safe, are effective in soiled conditions, (unlike alcohol gels) and incorporate the STERI-7 Reactive Barrier Technology, giving up to three hours protection after application. The recommended use is 1 ml per hand wash. Most alcohol gels require 3 ml per hand wash. This means STERI-7 hand Soap and Hand Sanitisers are very cost effective in use; e.g. 1 litre of STERI-7 hand sanitiser is the equivalent to 3 litres of alcohol gel but offers far greater efficacy and on-going protection.
